Ingestion: If swallowed, immediately give 3-4 glasses of milk (if unavailable, give water). DO NOT induce vomiting. If vomiting occurs, give fluids again. Have physician determine if patient's condition allows for induction of vomiting or evacuation of the stomach. Do not give anything by mouth to a convulsing or unconscious person. Get immediate medical attention.

Inhalation: Remove from area to fresh air. If not breathing, clear airway and start artificial respiration. If victim is having trouble breathing, give supplemental oxygen, if available. Get immediate medical attention.

ODOR THRESHOLDS: None

HEALTH HAZARDS (ACUTE AND CHRONIC): Although pH is not a precise indicator of irritation potential, this product should be handled as possibly irritating to the eyes based on pH. CONCENTRATE Classified as mildly irritating to skin based on animal studies. Inhalation of mist may be irritating to the respiratory tract.

SIGNS AND SYMPTOMS OF OVEREXPOSURE: Eyes - tearing, redness. Direct contact to concentrate may cause severe damage. Concentrate is corrosive to eyes causing burns and possible corneal damage. Skin, redness, some mild swelling possible. Concentrate may be corrosive to the skin with long term exposure, causing burns if contact is long or repeated. Local effect may consist of multiple areas of superficial destruction of the skin or of primary irritant dermatitis due to defatting of the skin. Skin damage may not be immediately painful or visible. Inhalation - Concentrate may cause chest discomfort, mucus membrane irritation and coughing. Ingestion - irritation, nausea vomiting & diarrhea. Concentrate corrosive to mucus membranes of mouth, esophagus & stomach.

CONDITIONS GENERALLY RECOGNIZED AS BEING AGGRAVATED BY EXPOSURE: Persons with pre-existing skin disorders may be more susceptible to irritating effects. Persons with pre-existing lung disorders may be more susceptible to irritating effects. **CARCINOGENICITY:** None

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage. Measures against circulatory shock, as well as oxygen and measures to support breathing manually or mechanically may be needed. If persistent, convulsions may be controlled by the cautious intravenous injection of a short acting barbiturate drug.
